

A low-angle, upward-looking photograph of several modern skyscrapers with glass facades. The sun is low on the horizon, creating a warm, golden glow and long shadows. The sky is a mix of blue and orange. A semi-transparent orange shape is overlaid on the right side of the image, serving as a background for the text.

CARBON FOOTPRINT CALCULATOR

:THE NEED OF TODAY

The image is a vertical composition. The top half shows a dark, industrialized Earth with smokestacks emitting white smoke against a blue sky. The bottom half shows a vibrant, natural Earth with a savanna landscape, including a river, trees, and animals like giraffes, elephants, and birds. A text overlay is positioned in the center, spanning both halves.

In today's world, with full of pollution causing activities , there is an alarming situation all around. In such difficult times a team of four has come up with a solution, which is a **CARBON FOOTPRINT CALCULATOR**. This is highly needed in the modern-day world because humans are causing uncontrollable pollution which is life threatening.

HOW DOES IT WORK:

It records the human and other activities such as driving, eating, cooking etc. and calculates the result which is the carbon footprint of that person. It also alerts him/her if he/she is exceeding the average value which is given in the program.

ITS USES AND APPLICATIONS:

- 1. It can be used to calculate the carbon footprint of a particular person.*
- 2. It may make a person feel guilty who is responsible for emitting too much air pollution.*
- 3. According to the latest data , over 7 million people die every year due to diseases caused by air pollution. This can bring down the death rate.*
